

Engineering Changes – Spring 1999

WaterGuard IV

A new WaterGuard assembly has been developed and is now supplied for the complete range of OASIS bottled water coolers. The new WaterGuard system is easier to install and has fewer parts than previous designs. To order complete WaterGuard IV kits, use the following part numbers :

Removable Reservoir Coolers	033863-010
BLF1A / BLF1E Coolers	033863-020
BPE Coolers	033863-030

Refrigeration System Driers

Every refrigeration circuit used in OASIS water coolers contains a drier. Its purpose is to ensure that moisture does not contaminate the refrigerant and adversely affect the performance of the cooler. As a result of administrative changes, Service Centres need to request the following part numbers when ordering driers for cooler repairs :

Current Number	New Number
031593-002	033380-002
031593-003	033380-003
031593-007	033380-007

Mechanical Floats

A conversion kit is now available to convert all Point of Use coolers to mechanical float operation. Previously, OASIS Point of Use coolers used a solenoid valve to cut off the water flow into the reservoir. Each kit comes complete with detailed instructions together with all the parts necessary to convert from solenoid operation to mechanical float. To order complete mechanical float conversion kits, use the following part numbers :

Aquabar	POU1LM	033392-001
Quad	PHF1LQ	033392-002
Countertop	POU1CT	033392-003
RR/SR	POU1RR/SR	033392-004
