

New Hot Tank Drain System

OASIS have released a new drain valve system to be used on all hot tanks (both one-piece and two-piece) across the entire product range

The new drain valve is simpler in construction and does not require special tools to open or change.

This new drain system is illustrated in the photographs below:

The valve body is fitted to the condenser and the removable plug is screwed into position to stop it from being opened accidentally – simply remove this screw and the plug can be opened by hand.

Part numbers for the new drain system are as follows:

033970-001	DRAIN VALVE
035023-001	DRAIN TUBING (0.375")
024070-001	CABLE TIE (two required)
